Summary

Junior Technical Engineer with 1 year of hands-on experience in Linux system administration, Docker-based gateway deployment, and IP network infrastructure across distributed client environments. Experienced in remote system configuration, Ubuntu OS installation, and centralized monitoring of multi-site systems. Proven ability to troubleshoot network, system, and streaming issues to ensure high availability and operational reliability. Actively leveraging field and infrastructure experience to transition into Network, Cloud, and DevOps engineering roles.

Technical Skills

Cloud (AWS): EC2, VPC, IAM, S3, ALB, Auto Scaling, RDS

DevOps & CI/CD Tools: Docker, Kubernetes, Jenkins, Terraform, Maven, SonarQube

Version Control: Git, GitHub

Operating Systems: Linux (Ubuntu, Amazon Linux)

Experience

Orego Biz Solutions Pvt Ltd

Junior Technical Engineer

September 2025 - June 2026

Bengaluru, India.

- Managed Git repositories, including repository creation, user access control and version control administration.
- Deployed and remotely configured Docker-based gateway services on Linux systems, supporting containerized application delivery across distributed client sites.
- Performed network configuration and troubleshooting, including IP address management, switch configuration, and LAN setup, to maintain connectivity across multi-site infrastructure.
- Designed and implemented static IP addressing schemes for newly provisioned network devices, along with device provisioning and firmware configuration via web-based management portals.
- Supported end-to-end deployment lifecycle: hardware installation → network setup → OS installation → application configuration → live streaming validation.

Personal Project

Project: Automated Java App Deployment using Terraform

Tools: Terraform, AWS EC2, Jenkins, Docker, Maven, GitHub

- Provisioned AWS EC2 infrastructure using Terraform, including custom security groups for controlled access
- Automated server setup via Bash user-data script, installing Java, Docker, and Jenkins on instance launch.
- Built a CI/CD pipeline in Jenkins to clone, build, and containerize a Java (Spring Boot) application.
- Deployed the containerized app using Docker, reducing manual deployment effort.
- Improved deployment reliability and consistency through end-to-end automation, from provisioning to release.

Education

Bachelor of Technology (B. Tech) in Mechanical Engineering

PACE Institute of Technology and Science, Ongole

August 2019 – April 2023
