DEVOPS ENGINEER | AWS | LINUX | CI/CD

Summary

Junior Technical Engineer with hands-on experience in **Linux system administration, Docker-based gateway deployment, and IP network infrastructure** across distributed client environments. Experienced in **remote system configuration, Ubuntu OS installation, and centralized monitoring** of multi-site systems. Proven ability to troubleshoot **network, system, and streaming issues** to ensure high availability and operational reliability. Actively leveraging field and infrastructure experience to transition into **Network, Cloud, and DevOps engineering roles**.

Experience

Junior Technical Support Engineer - Network & Systems Operations
Orego Biz Solutions Pvt Ltd - (Sep 2025 – Present)

- Designed, deployed, and remotely configured Docker-based gateway services on Linux systems.
- Managed remote infrastructure operations by coordinating with client IT teams to install Ubuntu OS, and onboard systems for centralized management.
- Performed Linux system administration tasks including OS installation, network configuration, and troubleshooting for client production environments.
- Assigned and managed static IP addressing schemes for newly deployed network devices and performed device provisioning, firmware access, and configuration via camera portals and web interfaces.
- Assisted in field troubleshooting of network, power, and hardware-level issues affecting system availability.
- Supported end-to-end deployment lifecycle: hardware installation → network setup → OS installation → application configuration → live streaming validation.

Technical Skills

- Cloud (AWS): EC2, VPC, IAM, S3, ALB, Auto Scaling, RDS
- DevOps & CI/CD Tools: Docker, Kubernetes, Jenkins, Terraform, Maven, SonarQube
- Version Control: Git, GitHub
- Networking: TCP/IP, DNS, DHCP, Subnetting, Security Groups, Load Balancing
- Operating Systems: Linux (Ubuntu, Amazon Linux)

Project: Automated Java App Deployment using Terraform

Tools: Terraform, AWS EC2, Jenkins, GitHub, Maven, Docker

- Provisioned EC2 infrastructure with Terraform and secure access via custom security groups.
- Installed Jenkins and Docker on EC2 to automate CI/CD pipeline.
- Containerized Java app using Docker and deployed via Jenkins, reducing manual efforts
- Demonstrated high availability setup using ELB and Auto Scaling Groups.
- Improved deployment reliability and reduced manual intervention through automated CI/CD

Education

Bachelor of Technology (B. Tech) in Mechanical Engineering
PACE Institute of Technology and Science, Ongole
August 2019 – April 2023

Additional Information

- Hands-on experience in Linux, networking, and AWS cloud infrastructure.
- Implemented CI/CD pipelines integrating Jenkins, Maven, Docker, and SonarQube.
- Provisioned cloud resources using Terraform (IaC).
- Familiar with container orchestration using Kubernetes.
